

ROLLING JACKS

8700/8900

Branick®

Proudly Made in the U.S.A. 

Fits all the most popular 4-post lifts!

Made at the manufacturing facility in Fargo, ND, Branick's Rolling Jacks fit the most popular 4-post lifts, replacing original equipment jacks. Available in both 7,000 and 9,000 pound capacity, these heavy duty, air-hydraulic powered rolling jacks come with telescoping mounting brackets and the lift arms adjust from 33 to 50 inches. The narrow width allows easy access to the area of the vehicle being serviced, and the spring-loaded mounting bracket rollers allow the jack to be easily positioned, and then automatically locked into place when weight is applied. There's also a mechanical 3-position lock. Extension adaptors are available for an additional 7.5". Branick's quality jacks will carry the load for you with ease.

A jack extension kit is also available for when you need added lift.

Branick makes jack brackets for the following brands:
Rotary, JBC/FMC, Hunter, Acanus, Wheeltronics
