

TIRE INFLATORS AIRHEAD

Branick®

Tough, time-saving tire inflator!

The AirHead has a high strength aluminum body and is tough enough to withstand the abuse that is common in a shop. It has an easy to read magnified linear scale, which is in a sealed environment ensuring debris isn't going to affect the reading. You'll save time because you can inflate and deflate without removing the inflator from the valve stem. The AirHead has two models that handle from 138 psi to 174 psi. Both are certified and calibrated to +/- 2 psi. There's several hose lengths and a variety of chuck styles to choose from.

No More Back And Forth!

FEATURES

Valve design that increases inflation/.....Fast, high-flow inflator deflation rates

Cast aluminum body..... Built to withstand the harshest work environments

Proven linear spring gauge..... Durable and accurate

Magnified clear linear gauge display..... Easy to read

Individual testing and certification..... California CARB Compliant!

Large range of options and accessories..... Versatile inflator that will withstand the tough shop environment
