NO BELLS, NO WHISTLES, JUST GETS THE JOB DONE!

The Branick 5025 Tire Spreader will handle any passenger tire up to a 12" bead width, including low profiles. The all steel construction makes it durable and the no frills design makes it highly affordable. The 5025 base floor mounts to provide a firm stable work surface and the tire repair plate means you don't have to balance the tire while adjusting and operating the spread arms. If you need a spreader that will do the job but doesn't cost a lot, the 5025 is the spreader for you. Made in the U.S.A. at Branick's manufacturing facility in Fargo, ND!
